Serp es un sistema de bancas modulares integrado por seis modelos de radio diferente cuya adición nos permite formalizar largas bancadas zigzagueantes con o sin luz LED. El redondeo de los extremos permite la instalación de módulos en continuidad sin exigente precisión. En su versión Serp Comfort los módulos incorporan el asiento de madera de teca enrasada.

Hormigón | Modular | 🛮 243 cm/máx. | 📥 1520 kg | 🖫 4

#### C Update 03.07.2023

#### Origen

El concepto de la banca modular Serp Comfort nace para ser utilizado en la plaza elevada del centro comercial Diagonal Mar de Barcelona en los que también se incorpora por primera vez la luz LED en las ranuras estándar a tal efecto.

#### Modular

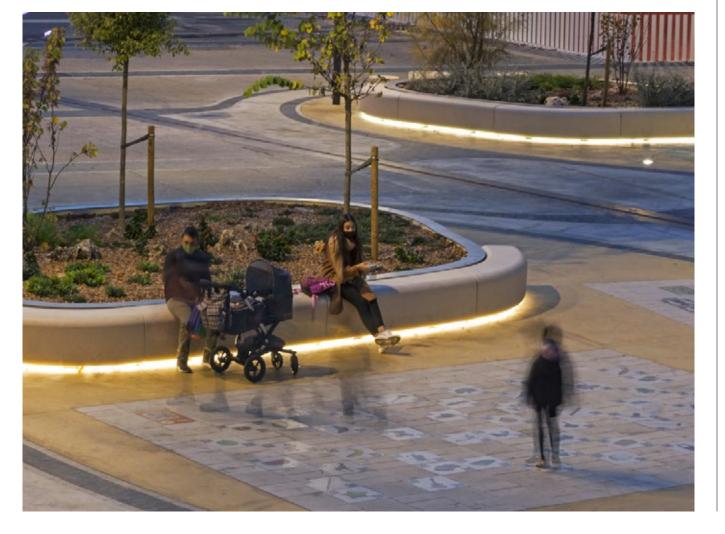

Las distintas agregaciones del sistema modular *Serp* permite crear bancas continuas rectas u onduladas. También bancas retenedoras de tierra y límite entre áreas vegetales, espacios de estancia y circulación peatonal.

#### Material

Los módulos de sección cuadrada de 50 x 50 cm y aristas suavemente redondeadas se fabrican en hormigón moldeado con un acabado decapado e hidrofugado y colores de la carta estándar *Escofet*.

#### Instalación

Debido a su gran peso se apoya sutilmente sobre el terreno o el pavimento sin necesidad de anclajes. Cada módulo dispone de un zócalo con dos pasos de eslinga de elevación y transporte, elevándolo del suelo para facilitar la escorrentía de las aguas pluviales.
